SUMMARY

Computer Science Engineering graduate (2026, CGPA 8.16) skilled in Python, Java, and SQL, who learns best by building — a real-time lost-and-found portal, a multi-agent AI system that reads legal land records, and a hostel management system with role-based access control. Comfortable across the stack: Flask and Node.js on the backend, React on the front. Looking for a Full Stack Developer or Software Engineer role where I can keep shipping and keep learning.

TECHNICAL SKILLS

Languages	Python, Java, C, C++, JavaScript, SQL
Web Technologies	HTML5, CSS3, Bootstrap 5, Node.js, Express.js, React.js, Vite, Tailwind CSS
Databases	MySQL, PostgreSQL, SQLite3, MongoDB, Redis
Frameworks & Tools	Flask, SQLAlchemy, Spring Boot, Framer Motion, Leaflet.js, Git, GitHub, VS Code, Docker
Core Concepts	DSA, OOP, REST APIs, JWT Auth, WebSockets, DBMS, Machine Learning basics
Cybersecurity	Log analysis, vulnerability assessment, ethical hacking fundamentals (TryHackMe)
Operating Systems	Windows, Linux (Ubuntu, Kali Linux)

PROJECTS

FindIt — Campus Lost & Found Portal [React](#) · [Flask](#) · [PostgreSQL](#) · [Redis](#) · [Socket.io](#) | [Live](#) | [Frontend ↗](#) | [Backend ↗](#)

- Built a full-stack portal that matches lost and found items and alerts users in real time via Socket.io, instead of making them manually recheck listings.
- Added JWT authentication, Redis caching, and GPS location-pinning with Leaflet.js; containerized with Docker and deployed on Vercel.

ZaminSaathi — AI Land Document Assistant [Python](#) · [Google ADK](#) · [Gemini](#) · [Flask](#) | [GitHub ↗](#)

- Designed a 3-agent AI system that reads Karnataka land records, explains dense legal language in plain English, and cross-checks documents for discrepancies before they become disputes.
- Built as the capstone project for Kaggle x Google's 5-Day AI Agents course; separated permissions and audit-logging into independent security layers.

Hostel Management System [Node.js](#) · [Express.js](#) · [MySQL](#) · [HTML/CSS/JS](#) | [GitHub ↗](#)

- Built separate admin and student portals with role-based access control and 15+ RESTful API endpoints for registration, room assignment, fee recording, and complaint management.
- Designed a normalized MySQL database with 5+ related tables (students, rooms, allocations, fees, complaints) using foreign keys, with an end-to-end complaint tracking module.

HealthGPT — Disease Prediction System [Python](#) · [Flask](#) · [ML/CNN](#) | [Group Project](#) | [GitHub ↗](#)

- Owned the Flask backend connecting trained ML and CNN models to the frontend, for an 8-condition disease prediction system averaging 90%+ accuracy, built with a 4-person team for our final-year project.

Other Projects (7+ more, all on GitHub): **NoteFlash** (notes app, live), **TabletTime** (Android medication reminder), **Body Forge** (Android workout tracker), and more at [github.com/POSHANMS](#)

CERTIFICATIONS & PRACTICE

● JPMorgan Chase — Software Engineering Virtual Internship (Forage, Jan 2026)

Built a Spring Boot microservice that processes real-time transaction messages, persists them in an H2 database, and exposes REST endpoints for account balance queries.

● Deloitte Australia — Cyber Security Virtual Internship (Forage, Aug 2025)

Investigated simulated web activity logs during a client security breach, identified suspicious patterns, and documented findings as part of an incident response exercise.

● TryHackMe — 35+ rooms completed, 10 badges, Voyager rank

● Kaggle x Google — 5-Day AI Agents: Intensive Vibe Coding Course

Covered agent tool integration, context engineering, and secure production deployment of multi-agent systems; built ZaminSaathi as the course capstone.

● GeeksforGeeks Python Skill-Up Certification; InfySpringboard — DSA, Python, Cloud Computing

● 110+ DSA problems solved on LeetCode and GeeksforGeeks

EDUCATION

Bachelor of Engineering, Computer Science — Navkis College of Engineering | CGPA: 8.16 | 2022 – 2026

PUC Science — SDM Residential PU College | 84.83% | 2020 – 2022
